

# Title

RTOS Project Work

**Author**

**Version and date**

## 1 Summary

[Give a very short summary of your application. Background, why?, what problem do you solve?]

## 2 System Context

[Provide a brief context of the whole system: hardware, other systems, databases. This is usually a simpler version of the context diagram but with more images. No specific diagram syntax required.]

## 3 Requirements

[Provide a set of short requirements. Write them from the user perspective and quantifiable.]

| ID | Requirement | State                               |
|----|-------------|-------------------------------------|
|    |             | [open/<br>implemented/<br>rejected] |
|    |             |                                     |
|    |             |                                     |
|    |             |                                     |

## 4 Design

[Add your design diagrams: context, C/DFD, UML]

[If you create GUI, add GUI mockup here]

## 5 Runtime Statistics

| Task | Priority | Stack Allocated | Stack Usage in %<br>(high water mark) | (optional) Average<br>CPU usage in % |
|------|----------|-----------------|---------------------------------------|--------------------------------------|
|      |          |                 |                                       |                                      |
|      |          |                 |                                       |                                      |
|      |          |                 |                                       |                                      |

| Time            | Heap Usage in B |
|-----------------|-----------------|
| ~ 10s runtime   |                 |
| ~ 1min runtim   |                 |
| ~ 10min runtime |                 |

## 6 File Structure

[Give an overview of your files in your project with a short description]

## 7 User Manual

[Assume the microcontroller is programmed. What must the user do to use your application. Use simple instructions and pictures, ~1 page]

## 8 Version control

| Version | Date       | Description    | Author       |
|---------|------------|----------------|--------------|
| 0.1     | 26.02.2013 | Et ut aut isti | Peter Muster |
| 0.2     | 13.03.2013 | Et ut aut isti | Anna Meier   |
| 1.0     | 21.05.2013 | Et ut aut isti | Peter Muster |
