

Title

RTOS Project Work

Author

Version and date

1 Summary

[Give a very short summary of your application. Background, why?, what problem do you solve?]

2 System Context

[Provide a brief context of the whole system: hardware, other systems, databases. This is usually a simpler version of the context diagram but with more images. No specific diagram syntax required.]

3 Requirements

[Provide a set of short requirements. Write them from the user perspective and quantifiable.]

ID	Requirement	State
		[open/ implemented/ rejected]

4 Design

[Add your design diagrams: context, C/DFD, UML]

[If you create GUI, add GUI mockup here]

5 Runtime Statistics

Task	Priority	Stack Allocated	Stack Usage in % (high water mark)	(optional) Average CPU usage in %

Time	Heap Usage in B
~ 10s runtime	
~ 1min runtim	
~ 10min runtime	

6 File Structure

[Give an overview of your files in your project with a short description]

7 User Manual

[Assume the microcontroller is programmed. What must the user do to use your application. Use simple instructions and pictures, ~1 page]
